

# Improve learning outcomes and boost engagement with **Genio**

Genio is designed to unlock better learning outcomes for every student - while incorporating tools that seamlessly support the teaching process. With the Educator Admin Role, you can gain valuable insights into how your students are engaging with the platform, and even use Genio yourself to record and disseminate class materials. Robust privacy controls ensure you can share content and foster collaboration knowing your classroom discussions and materials remain secure.

Whether you're looking to boost student performance, better understand classroom engagement, or maintain full control over your teaching content, Genio is here to support you and your students at every step.

---

## How does Genio support faculty?

### ► **Improve student learning outcomes**

Analysis by LXD Research has found that Genio has a clear impact on student outcomes, reducing student dropout intentions (from 7% to 5%) and increasing GPA (from 3.34 to 3.46). Additionally, it found that high-usage students had significantly higher engagement scores after controlling for baseline responses.

### ► **Understand student usage**

With our dedicated Educator Admin Role, you can gain a clear understanding of how students are using the platform, while also benefitting from Genio Notes yourself.

By using Shared Collections, you can record classes yourself, controlling what information is (and isn't) recorded, before appending any supplementary content and sharing directly with your students.

### ► **Privacy features built-in**

Genio Notes includes a range of features to support your teaching and ensure students adhere to institutional policies.

Genio can be paused and resumed at any time, so recording can be stopped if sensitive information is being discussed during a particular class segment. Students can be reminded of their institution's recording policies directly in-app, so they are aware of any restrictions around how they can record classes.
